Importing Modules

```
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
import numpy as np
```

1. Download the dataset
2. Look the dataset into the tool

data=pd.read_csv("Mall_Customers.csv")
```

3. Perform Below Visualizations

· Univariate Analysis

· Bi-Variate Analysis

· Multi-Variate Analysis

```

In [9]:
```

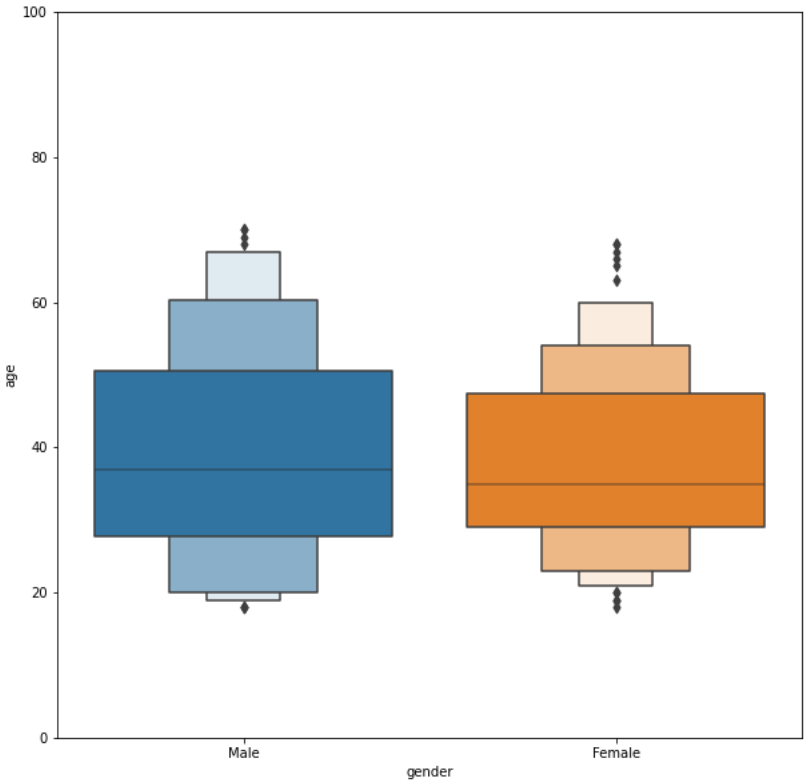
f, ax = plt.subplots(figsize=(10,10))
fig = sns.boxenplot(x='gender', y="age", data=data)
fig.axis(ymin=0, ymax=100);
```



ANALYSIS

There is no difference in age of rings for male and female (18-70).

5. Check for Missing values and deal with them

In [18]:
```
data[data.duplicated()]
```

Out[18]:

customer_id	gender	age	annual_income	spending_scores

there is no missing values and duplicates in dataframe

6. Find the outliers and replace them

In [19]:
```
for i in data:
    if data[i].dtype=='int64':
        q1=data[i].quantile(0.25)
        q3=data[i].quantile(0.75)
        iqr=q3-q1
        upper=q3+1.5*iqr
        lower=q1-1.5*iqr
        data[i]=np.where(data[i] >upper, upper, data[i])
        data[i]=np.where(data[i] <lower, lower, data[i])
```

After removing outliers, boxplot will be like

In [20]:
```
plt.boxplot(data['age'])
```
